EXPERIENCE

Founder and Software Engineer

Sep 2021 – Present

OverKill Development

Orlando, FL

- Founded and led a team of **4–5 software developers** while architecting and maintaining a full-stack software distribution platform and multiplayer systems used by **10,000+ cumulative players** across **8–15 active game servers**.
- Supported approximately **\$5K–10K in product revenue** by building an automated purchase workflow that integrated Stripe payments, Steam OAuth authentication, and GitHub organization provisioning.
- Eliminated manual release steps by integrating GitHub Actions with Jenkins to automatically build and deploy Dockerized applications to an Ubuntu VPS behind Traefik and Cloudflare.
- Mentored **12–15 aspiring developers** in software development, multiplayer systems, and asset integration, with several later launching and maintaining independent servers and software projects.
- Optimized multiplayer systems used by **10,000+ cumulative players** by reducing algorithmic complexity, restructuring persistent data storage, and developing automation tools for large-scale configuration management.

Lead DevOps Engineer – DARTS Research Project

May 2025 – Aug 2025

Valencia College and University of Central Florida

Orlando, FL

- Designed and deployed reproducible Apache Airflow workflows on Kubernetes to process **50+ continuously updated photovoltaic research datasets**.
- Standardized research deployment environments by configuring Kubernetes workloads, Docker containers, persistent storage, and documented setup procedures across research computing systems.
- Eliminated manual weekly dataset processing by automating shared-storage ingestion, transformation, and PostgreSQL loading through Apache Airflow pipelines.
- Documented deployment procedures and presented the infrastructure architecture to photovoltaic researchers, establishing a maintainable foundation for FAIR and reproducible computational workflows.

PROJECTS

Momentum – Fitness Analytics Platform

Java, Spring Boot, React, MySQL, Spring Security, JWT

- Built and deployed a full-stack fitness analytics platform with Spring Boot, React, MySQL, Spring Security, and JWT, supporting secure workout tracking and long-term progress visualization.
- Designed a normalized MySQL schema and RESTful service layer using Spring Boot and JPA/Hibernate to manage users, workouts, exercises, and historical performance data.
- Developed interactive dashboards that aggregate workout history into visualizations for training trends, exercise progress, and performance over time.

Self-Hosted AI and Infrastructure Platform

Docker, Ubuntu, llama.cpp, Traefik, CouchDB, Gitea

- Designed and maintained self-hosted Ubuntu infrastructure supporting **20+ Dockerized services** across AI, networking, media, security, Git hosting, photo management, and knowledge management.
- Deployed GPU-accelerated **llama.cpp** inference, SearXNG private search, and Qdrant vector storage to support local LLM and retrieval workflows.
- Integrated Obsidian LiveSync with Apache CouchDB to synchronize a private knowledge base across desktop and mobile devices.

Personal Portfolio Website

React, Vite, Docker, Jenkins

- Built a responsive React and Vite portfolio that presents software projects, technical experience, and live production applications through a centralized web interface.
- Automated production deployments through Jenkins CI/CD pipelines that build source from GitHub and deploy Docker containers to a self-hosted Ubuntu VPS.
- Configured Traefik reverse-proxy routing and automated TLS certificate management to securely expose containerized applications.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL, C++, C#

Backend: Spring Boot, Spring Security, Hibernate, JPA, REST APIs

Frontend: React, Vite

DevOps and Infrastructure: Linux, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Traefik, Apache Airflow

Databases: MySQL, PostgreSQL, Apache CouchDB, MongoDB

Developer Tools: Git, GitHub, Maven, IntelliJ IDEA, VS Code, Visual Studio, Figma, Perforce

EDUCATION

Valencia College

Bachelor of Applied Science in Computing Technology and Software Development

Orlando, FL

Aug 2025
