SUMMARY

Software Engineer and BAS graduate in Computing Technology & Software Development with experience building backend applications, full-stack platforms, CI/CD pipelines, and self-hosted infrastructure. Strong foundation in **Java**, **Spring Boot**, **SQL**, and containerized deployments. Built production-style systems involving backend services, DevOps automation, e-commerce workflows, and multiplayer tooling.

EDUCATION

- **BAS in Computing Technology & Software Development** 2025
Valencia College – Orlando, FL

EXPERIENCE

- **Lead DevOps Engineer – DARTS Research Project** 2025
Valencia College & University of Central Florida *Orlando, FL*
 - **Containerized Data Pipelines:** Designed and deployed containerized data pipelines using **Apache Airflow**, focusing on reliability, reproducibility, and observability.
 - **Cloud Infrastructure:** Provisioned and maintained **Kubernetes** workloads with persistent storage, configuration management, and deployment consistency.
 - **Cross-Team Collaboration:** Worked with researchers and engineers to troubleshoot deployments, improve pipeline performance, and support FAIR data practices.
- **Founder / Software Developer** 2021 – Present
OverKill Development *Orlando, FL*
 - **Platform Development:** Built and maintained a production-style platform supporting digital distribution, subscriptions, authentication workflows, and automated user access systems.
 - **Backend Engineering:** Developed backend services and APIs using **Java**, **Spring Boot**, structured data models, and persistent storage supporting configurable systems and community tooling.
 - **DevOps & Infrastructure:** Implemented containerized deployments using **Docker**, maintained self-hosted infrastructure, and configured CI/CD workflows for releases and deployments.
 - **System Design:** Developed modular multiplayer systems including progression, inventory, analytics, and configuration-driven tooling used by active community members.

PROJECTS

- **OverKill Development Platform:** *React, Spring Boot, MySQL, Docker, Stripe, AWS SES*
Designed and deployed a full-stack platform supporting digital product distribution, subscription management, authentication, payment processing, and automated user provisioning. Developed backend APIs, email verification workflows, persistent data storage, and containerized deployments.
- **Momentum – Workout Tracking Platform:** *Java, Spring Boot, Hibernate, MySQL*
Developed a workout tracking application with user authentication, workout management, REST APIs, relational database design, and MVC architecture. Expanded the original senior project into a continuously maintained personal application.
- **CI/CD Deployment Pipeline:** *Jenkins, Docker, Kubernetes, GitHub*
Built automated CI/CD pipelines supporting source control integration, automated builds, testing, containerized deployments, and release automation across development environments. Implemented deployment workflows, monitoring integrations, and infrastructure automation practices.

SKILLS

- **Languages:** Java, JavaScript, Python, C++, C#
Backend: Spring Boot, Hibernate, REST APIs, Maven, Tomcat, JWT Authentication
DevOps / Infrastructure: Docker, Kubernetes, Jenkins, CI/CD, Linux, Git
Databases: MySQL, MongoDB
Tools: IntelliJ IDEA, Visual Studio, VS Code, Perforce, Figma
