

EXPERIENCE

Founder & Software Engineer

2021 – Present

OverKill Development

Orlando, FL

- Founded and led a team of **4–5 software developers** while architecting, developing, and maintaining a full-stack software distribution platform supporting **10,000+ players** across **8–15 active game servers**.
- Generated approximately **\$5K–10K** in revenue by integrating Stripe payment processing, Steam OAuth authentication, and automated GitHub organization provisioning that securely granted customer access following successful purchases.
- Reduced deployment effort from manual releases to fully automated CI/CD pipelines by integrating GitHub Actions with Jenkins to build and deploy Dockerized applications to an Ubuntu VPS behind Traefik and Cloudflare.
- Mentored **12–15 aspiring developers** in software development, game systems, and asset integration, with several launching and maintaining their own multiplayer servers and software projects.
- Improved scalability and runtime performance for multiplayer systems supporting **10,000+ players** by optimizing algorithms, reducing computational complexity, redesigning data storage strategies, and developing custom automation tooling.

Lead DevOps Engineer – DARTS Research Project

2025

Valencia College & University of Central Florida

Orlando, FL

- Automated computational data processing for photovoltaic researchers, enabling reproducible workflows for **50+ continuously updated research datasets** by deploying Apache Airflow on Kubernetes.
- Standardized deployment environments for research teams by designing Kubernetes infrastructure with Docker, persistent storage, and documented setup procedures that improved deployment consistency.
- Eliminated manual weekly processing of **50+ research datasets** by automating dataset ingestion through shared storage workflows and Apache Airflow pipelines that transformed and loaded data into PostgreSQL.
- Enabled long-term adoption of FAIR computational workflows by documenting deployment procedures and presenting infrastructure architecture to photovoltaic researchers, supporting reproducible research environments.

PROJECTS

Momentum – Fitness Analytics Platform

Java, Spring Boot, React, MySQL, JWT

- Enabled secure workout tracking and long-term progress visualization by developing a production-style full-stack fitness platform using Spring Boot, React, and MySQL.
- Improved backend maintainability and scalability by designing a normalized relational database schema, implementing RESTful APIs, and managing persistence with JPA/Hibernate and MySQL.
- Improved user insight into workout performance by aggregating historical workout data into interactive dashboards that visualize trends, progress, and exercise history.

Self-Hosted AI & Infrastructure Platform

Docker, Ubuntu, llama.cpp, Traefik, CouchDB, Gitea

- Designed and maintained a self-hosted Ubuntu infrastructure supporting **20+ containerized services** across AI, networking, media, security, Git hosting, photo management, and knowledge management using Docker.
- Enabled local AI experimentation by deploying GPU-accelerated **llama.cpp** inference, private search, vector databases, and supporting infrastructure for local LLM experimentation.
- Improved knowledge accessibility across devices by integrating Obsidian LiveSync with Apache CouchDB into a self-hosted synchronization platform.

Personal Portfolio Website

React, Vite, Docker, Jenkins

- Created a centralized platform showcasing software engineering projects and technical experience by developing a responsive React and Vite web application.
- Automated production deployments by implementing Jenkins CI/CD pipelines that build and deploy Docker containers to a self-hosted Ubuntu VPS.
- Enabled secure public hosting of self-hosted applications by configuring Traefik reverse proxy routing and automated TLS management.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C++, C#

Frameworks & Libraries: Spring Boot, Spring Security, Hibernate, JPA, React, Vite

DevOps & Infrastructure: Linux, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Traefik, Apache Airflow

Databases: MySQL, PostgreSQL, Apache CouchDB, MongoDB

Developer Tools: Git, GitHub, IntelliJ IDEA, VS Code, Visual Studio, Maven, Figma, Perforce

EDUCATION

Valencia College

Bachelor of Applied Science in Computing Technology & Software Development

Orlando, FL

Aug 2025
